11:17PM

IPO CHART

Inputs

input number of Attendees (int)

input numbers of Hours (int)

input Venue cost (float)

input cost of Food and Beverage (float)

input cost of Supplies and Promotion (float)

Process

Total Cost = Venue Cost + Food & Beverage Cost + Supplies/Promotion Cost

total / attendess = average cost per attendee

(food and beverage / total) * 100 = percentage

total / event hours = event cost per hour

Total Cost ÷ Number of Attendees = Average Cost per Attendee

Output

Event Budget Calculator

Inputs
Number of Attendees: 0
Event Hours: 0
Venue Cost: 0
Food & Beverage Cost: 0
Supplies & Promotion Cost: 0

Results
Total Event Cost: 0
Average Cost Per Attendee: 0
Food & Beverage Percentage: 0
Cost Per Event Hour: 0
Cost Per Attendee Per Hour: 0

The program will include two user-friendly output menus. The first menu, “Inputs,” will display all user-entered information so the user can verify that their values were entered correctly. The second menu, “Results,” will display the calculations generated by the program, providing the user with the key financial information for the event in an easy to read format.
